

Question 1E

The **Software Requirement Specification (SRS)** explaining the interaction between major components on my web application

1. Introduction

Project Title:

IRO (Issues Reporting Outlet)

Purpose

To provide an online platform where AAUA students and Akungba indigenes can report community and campus issues.

2. Functional Requirements

The system shall:

- Register users.
- Authenticate users.
- Allow issue reporting.
- Upload images.
- Track complaint status.
- Send notifications.
- Allow administrators to manage complaints.
- Generate reports.

3. Non-Functional Requirements

Performance

- Pages should load within 3 seconds.

Security

- Password encryption.
- Secure login.

Reliability

- 99% uptime.

Availability

- Accessible 24/7.

Usability

- Easy navigation.
- Mobile-friendly interface.

Scalability

- Able to support thousands of users.

4. Major Components

User Module

- Handles registration and login.

Complaint Module

- Stores issue reports.

Tracking Module

- Allows users to monitor complaint progress.

Admin Module

- Manages complaints and users.

Database

- Stores all system information.
